

## PATH REPORTING

### 1) Path Registration and Reports

1) Path registration information- collection of names, emails, credentials....

This will basically be the user's report. Or the users tab in the admin. Our registration is simple. We collect first name, last name, email, and registration date (that's automatic of course). See below for the opportunity to allow custom registration questions.

- Custom Registration Questions

Admins can add custom questions for users to fill out during sign up of their Path account.

Questions can include multiple choice and open ended questions. We also allow for a variety of predefined questions that can allow users to self-select into groups, pick their time zone, language, and state/country.

Admins can also choose if the users can alter their answers in the profile at any time.

Reporting is available for the admin on custom questions in the User Report.

- When users are signing up for their Path account, they will now be prompted to answer those specific custom registration questions.

## Reporting

Our enhanced reporting includes two unique modules. The first module is a System Dashboard that provides a visual representation of the activity in your account, as well as a heads-up display that lists all the important information such as total content, number of users, number of certificates etc. The second module contains our robust detailed reports that provide a comprehensive view of user activity, module activity, assessments and certificates issued, and many other reports. The reports give you the tools needed to quickly gauge a course or programs effectiveness or identify your most popular content. Designated personnel can be granted administrative access for a variety of reports including utilization stats, assessment results, registration profiles and multiple drill-down statistics available 24/7. Reports can be exported to Excel® for further sorting needs.

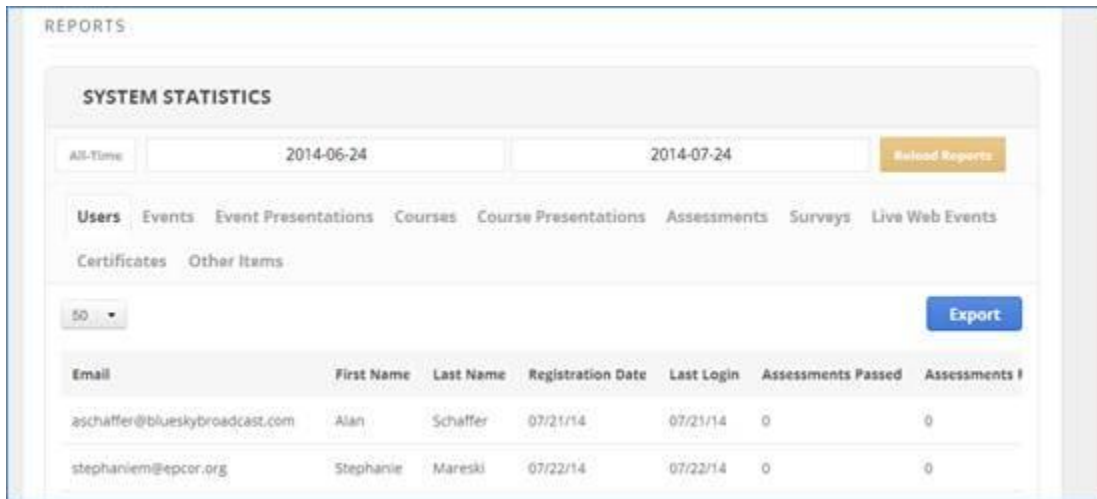

- Admin Dashboard

We internationalized the dates in the graphs and includes a day filter

The Courses and Presentation charts include a Top 5 listing

- Date range selection for reports

- Detailed reports you can filter by Users, Events, Presentations, Assessments, Surveys, Live Web Events, and Certificates.

- History/Transcript functionality

Users can go to their profile and view their history of activity.

Path will display progress of any item the user has visited along with a filter to sort by 100% completed courses or events. For the completed view we also allow the functionality for the user to print their transcript which will also show the credit values earned and date it was completed.
