**Data-driven discovery and control of complex systems:  
uncovering interpretable and generalizable models**

Often equations are unknown or are only partially known:

- ▶ Model discovery with machine learning & sparse optimization

Nonlinear dynamics are still poorly understood:

- ▶ Coordinate transformations to simplify nonlinear systems

**SIAM Conference on Computational  
Science and Engineering**

**Data-driven discovery and control of complex systems:  
uncovering interpretable and generalizable models**

Often equations are unknown or are only partially known:

- ▶ Model discovery with machine learning & sparse optimization

Nonlinear dynamics are still poorly understood:

- ▶ Coordinate transformations to simplify nonlinear systems

Our approach:

- ▶ Learn physics from data: interpretable and generalizable
- ▶ Respect known, or partially known, physics
- ▶ The existence of patterns facilitate sparse (few) measurements
- ▶ Machine learning is high-dimensional optimization with data

## Constrained Sparse Galerkin Regression

### Innovation 1: Enforcing known constraints

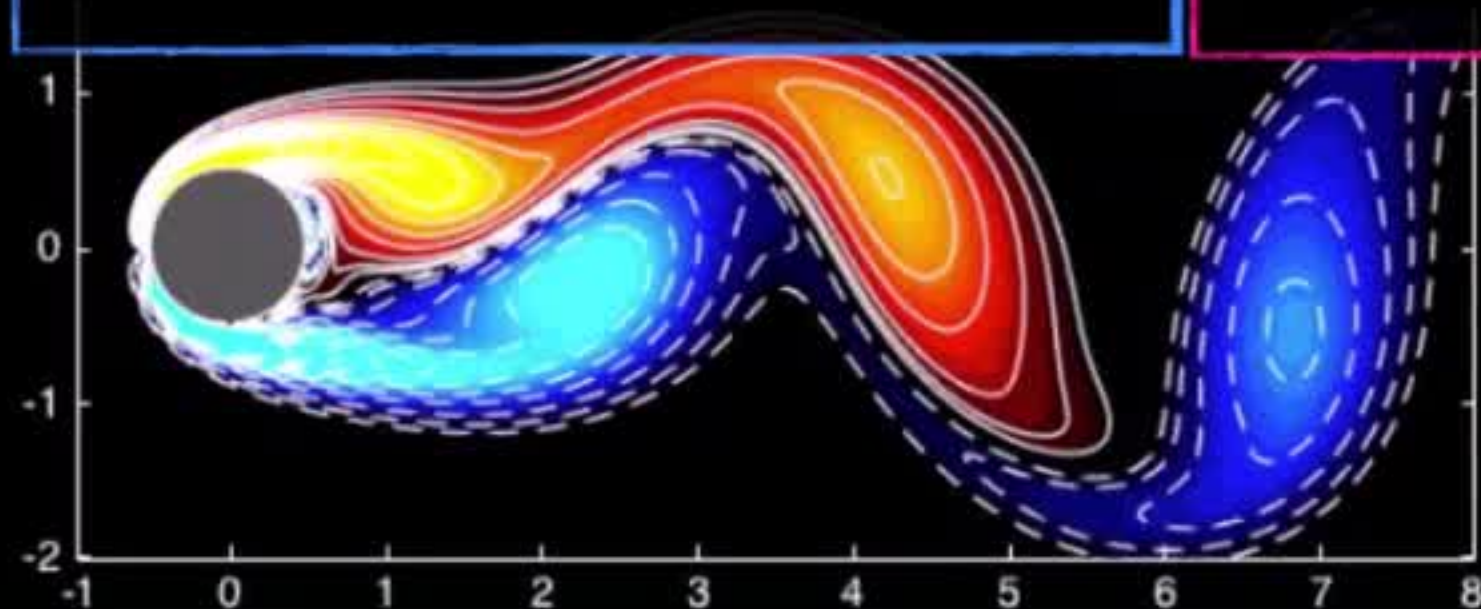

- ▶ Skew-symmetric quadratic nonlinearities to enforce energy conservation
- ▶ Improved stability

$$\min_{\xi, z} \|\Theta(\mathbf{X})\Xi - \dot{\mathbf{X}}\|_2^2 + z^T(C\xi - d)$$

### Innovation 2: Higher-order Nonlinearities

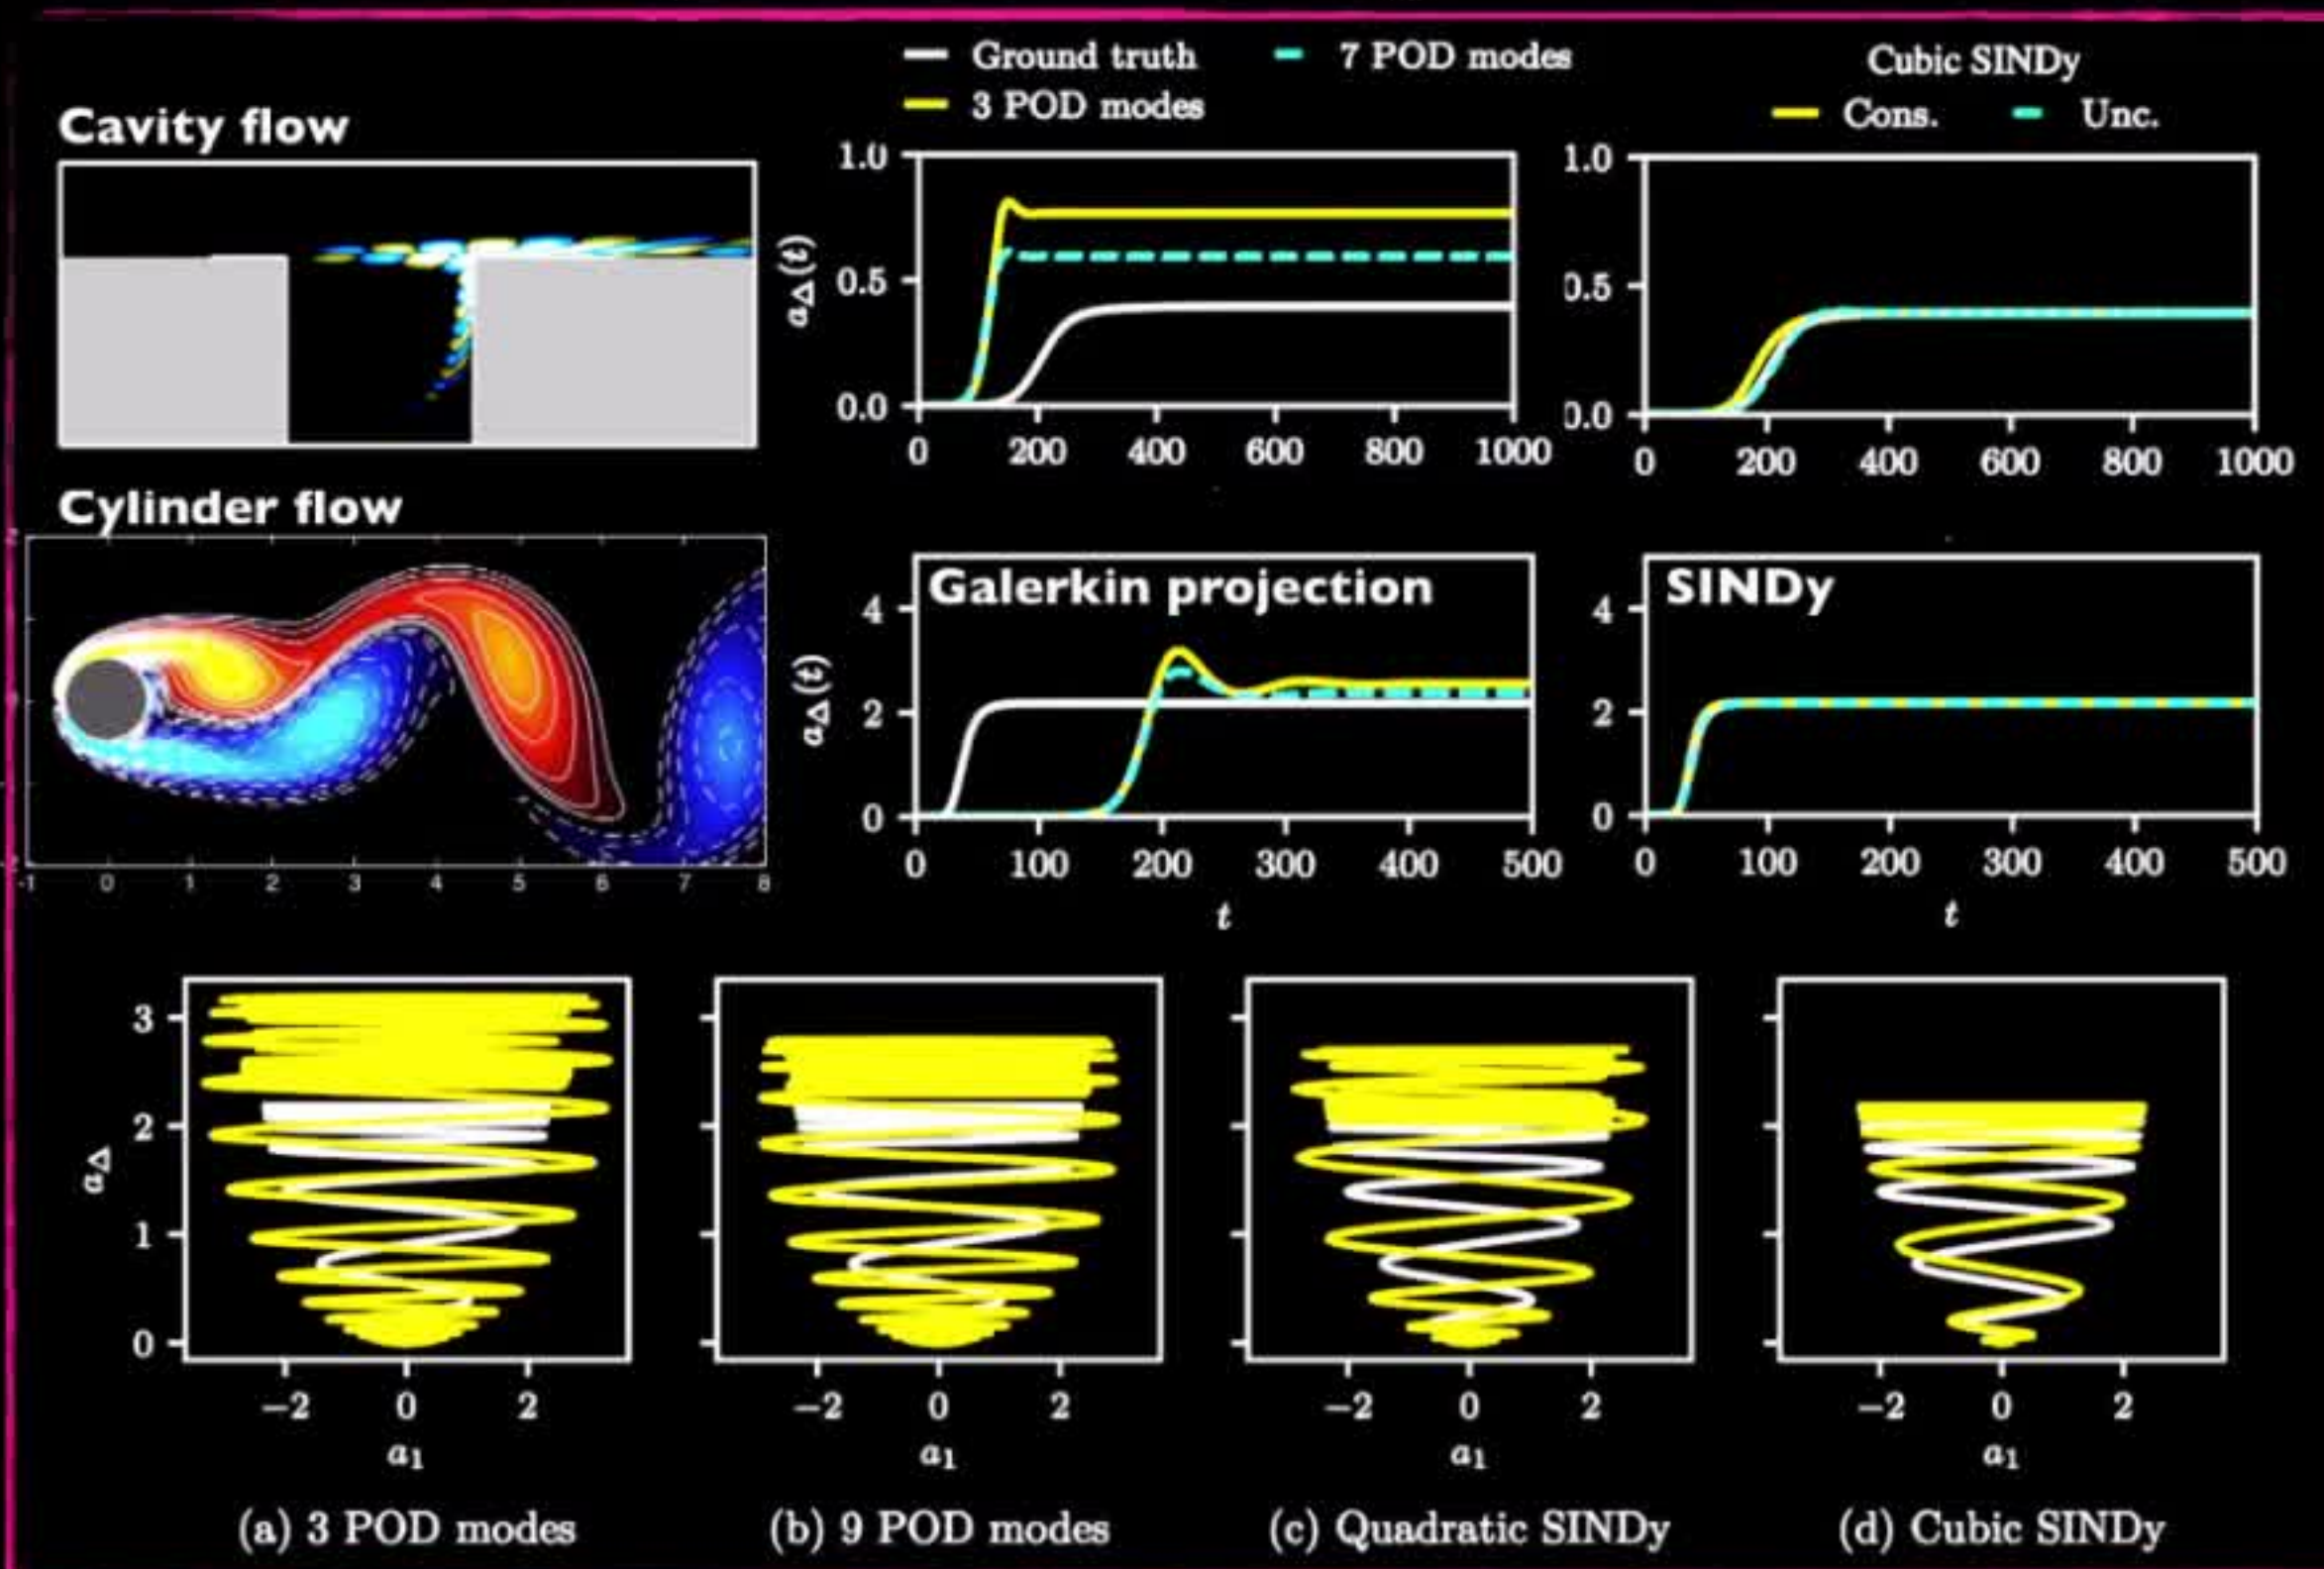

- ▶ Cubic, Quintic, Septic terms approximate truncated terms in Galerkin expansion

$$\begin{aligned} \dot{x} &= \mu x - \omega y + Axz \\ \dot{y} &= \omega x + \mu y + Ayz \\ \dot{z} &= -\lambda(z - x^2 - y^2). \end{aligned}$$
