Heather Genter, Denver Zoo

**Participants:** 207 registered. Max observed = 68

### Guest questions – see recording for LIVE q&a:

#### For Kathryn

Q: Do cheetahs experience feline non-recognition aggression? Your examples sound a lot like that (we've experienced it with clouded leopards as well as domestic cats). I'm interested to hear that gabapentin helped with reuniting them... that's good to know! (Mindy Babitz)

A: We have not talked about the feline, non-recognition aggression but that is a good thought and something for us to look more into. Yes, we have used gabapentin has been very helpful. There was just a paper put out about gabapentin and cheetahs as well. If you would like that paper feel free to email me [ksippel@binderparkzoo.org](mailto:ksippel@binderparkzoo.org).
