

Bust the Biomat!

When a drain field is clogged by biomat or over-compaction, don't **replace** it; **restore** it with the EarthBuster™! Our patented pneumatic soil fracturing technology has been used for over ten years to rejuvenate drain fields---and many of those fields are still working!

How It Works

EarthBuster™ delivers shots of compressed air into the soil at just the right depths to break up both compaction and overgrowth of septic biomat.

EarthBuster **immediately** opens channels through which lateral percolation can be restored. Your customers will see immediate relief!

Strong Profits

With EarthBuster™, you can complete an average drain field restoration job in 2-3 hours, earning \$1,500 to \$3,000 or more for your time. This can be done with a crew of 1 or 2, and then you're on to your next job! Some Earthbuster™ owners do over 200 jobs a year!

Pays For Itself

Lots of septic professionals will pay between \$100K and \$250K for a pumper truck, and it takes them hundreds of jobs to earn the money back. EarthBuster™ pays for itself in just 5-10 jobs!

Engineering & Construction

EarthBuster™ is proudly made in America, at our headquarters in Laurel, MT! It is ruggedly constructed to keep you up and running for a very long time with minimal maintenance.

Pneumatic Probe Tip

EarthBuster's™ pneumatic probe is pressed into the ground, and aided by a Sullair air hammer as needed to penetrate even compacted and rocky soils at depths up to 6 feet..

Superior welds on a stout frame

Maintenance is Minimal

EarthBuster's™ maintenance is minimal, requiring little more than pneumatic oil for each use, and the occasional lubrication of the zerks on the air hammer.

Your Tractor & Compressor

With EarthBuster™, you use your own tractor with a quick-attach mount, and your own compressor (100-150 psi, 125-180 cfm). The EarthBuster™ mounts on mini excavators, skid-steers, compact track loaders, and farm tractors.

MOUNTS TO:

Mini Excavator

Skid-Steer

Compact Track Loader

Tractor

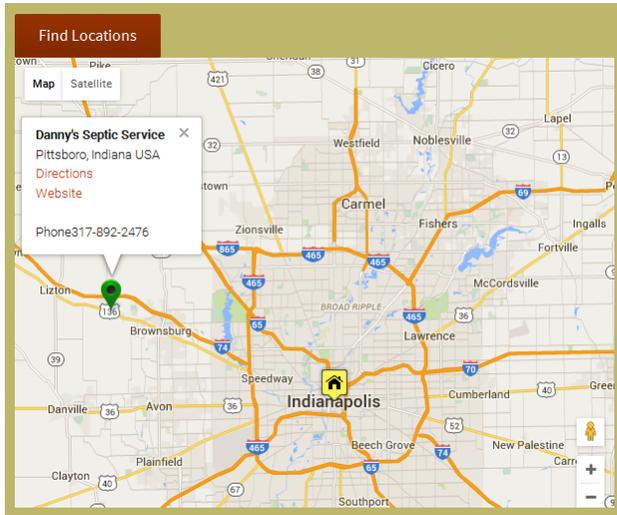

Standard Quick-Attach Mount

For Single-Service or Multi-Service Businesses

A septic company can become a true "full service" company once it can bust the biomat with EarthBuster™! Adding just one EarthBuster™ job per week can bring in \$75,000 to \$150,000 in profits each year. Meanwhile, however, a company that offers EarthBuster services as its sole offering could feasibly book up to 10 jobs per week!

We Help You Find Work!

We keep an up-to-date online directory of EarthBuster™ service providers at EarthBusters.com. This way, the public can not only learn about this cutting-edge, cost-saving solution without having to take **your** word for it, but they can find you by searching their local area.

Service Provider Location Map

Nope, this isn't a franchise deal; you'll own your EarthBuster™ outright, and you'll never pay us a royalty for using it. We just thought we'd help you get work, because we're in a great position to do that!

We're also developing other media, like rack cards that you can have customized with your business name and printed at your local print shop. You can hand these out to your existing customers, or to new prospects.

Make More – Work Less!

Drain field rejuvenation jobs with the EarthBuster can earn you \$1,500 to \$3,000 or more in 2 to 4 hours. Whether you use one or two workers on a job, EarthBuster pays for itself quickly, returning much more cash per hour than pumper work and drain field install work.
