

YourMembership Integration

Single-Sign-On

\$1,500 One Time Fee.

Integrate Single-Sign-On for Path. This estimate is based on the following workflow:

- Path sends user to client login page with redirect URL appended
- After login, client would send user back to Path URL with their Member ID (or a token/encrypted equivalent) appended
- Path would call client web service to pull user information and create account or login/update user

An option on top of the existing YourMembership SSO, which already designates member vs. non-member in the standard user profile call, Path can assign groups based on Group Codes returned in the profile groups call. Once enabled, Access Codes will need to be set up on Path that match Group Codes returned in the profile groups call.

Certificate Writeback

Included with SSO.

Integrate certificate-writeback from Path. This integration is based on the following workflow:

- Client sets up 'Certifications' in YM that correspond with Path courses
- Path Admin associates client Certification to Path course to map systems
- User completes course in Path and earns CE credits and/or certificate
- Path writes back CE earned to YM's API Sa.Members.Certifications.JournalEntry.Create

Event Purchase Synchronizaiton

\$3,500 One Time Fee.

Integrate live virtual event registration and purchase synchronization between YM and Path. All purchase and event registration will occur in YourMembership. On login to Path, the user's events will be synchronized into Path. The estimate is based on the following workflow:

- Client sets up events in YM that coursespon with Path events
- Path Admin associates client event in Path course to map systems
- User purchases or is registered for an event in YM
- On login, Path pulls in the list of purchased/registered events from YM for the user, and grants the user access to the corresponding content in Path.

Items needed from YM/client to being integration:

- YM credentials/token and endpoint
- Public key - non SA calls
- Private key - SA calls
- Certificate ID for testing CE write-back
- Test login for member and non-member

Pricing Note: There is a \$1,200 annual fee for Blue Sky maintenance and support of integration.
