OUR SMARTPHONE-BASED
DASH CAMERA SOLUTION

Visual Labs offers a smartphone-based dash camera solution to complement its body worn camera (BWC) solution. Agencies can easily manage their BWC and dash camera footage using a single evidence management platform. The dash camera system is simple to use and install, and offers significant cost savings over existing dash camera products.

AUTOMATIC ACTIVATIONS

Multiple automatic activation options ensure your dash cameras are recording when they need to be. These include lightbar activation, speed-threshold activation and linked camera activation with a BWC.

AUTOMATIC UPLOAD

Just like the Visual Labs BWC solution, the dash cameras are configured to automatically upload footage from the field. This makes footage transfer into the evidence management platform effortless.

EASY INSTALLATION

The dash camera system leverages existing ports and wiring in your vehicle, making it easy and quick to install.

SIGNIFICANT COST SAVINGS

Compared to outfitting a vehicle with a traditional dash camera system, Visual Labs' software-based approach can result in up to a 90% cost savings (approximately $600 vs. $6,000).
