# Path

Our Path suite of products delivers online courses and content anytime, anywhere.

## impexium Integration
Smarter, Simpler Membership Management

### Single-Sign-On

*Overview*
Single Sign-on functionality allows Path LMS to seamlessly connect with Impexium for user login and authentication. When a user clicks sign-in in Path LMS, they will be redirected to login on the familiar Impexium login screen. As soon as they've authenticated, they will be redirected back into Path to access their training. Member groups will be synchronized on login, so users can be assigned custom permissions based on the member type returned from the Impexium webservice.

User demographic data is also available to be synched from the Impexium profile to custom fields configured in Path. This allows designated demographic information to be displayed with the user's profile in the platform.

*Implementation*
2 weeks from contracting and receipt of integration endpoint/credentials/test logins

*Cost*
$1,500

### eCommerce

*Overview*
eCommerce Integration allows you to utilize the eCommerce functionality in Impexium to sell products/presentations/events and leverage the Path LMS platform as a delivery mechanism for that content. Upon purchase in Impexium, Path LMS will be notified of the purchase through a configured Impexium Webhook for "Product Purchase". The user's purchases are transferred to Path and the user will receive instant access to the corresponding course/event. For webinars, the user will be signed up for the webinar in Path. Each item set up in Path will be able to be mapped to a corresponding event/product in Impexium by using the Impexium Product Code.

*Implementation*
Requires SSO, total of 4 week implementation timeline from receipt of API credentials

*Cost*
$1,500

### CE Writeback

*Overview*
Blue Sky integrates with Impexium's API to send back CE credits earned by a user in Path as "Education Credits" in the Impexium database. The writeback will trigger when a user earns a certificate in Path. The data that is written back includes: Credit Type, Description (Course name), Number of Credits Earned, Date Earned, Provider Name, State Name, and Reference values that will be mapped to the appropriate fields on the Education Credit object in Impexium.

*Implementation*
Requires SSO, total of 4 week implementation timeline from receipt of API credentials

*Cost*
$1,500
